Professional Summary

Software Engineer with 3.5+ years of experience building scalable full-stack, backend, and Generative AI applications. Experienced in distributed systems, microservices, LLM applications, RAG pipelines, AI agents, MCP integrations, and cloud-native platforms. Strong in system design and building production-ready, fault-tolerant software and AI solutions.

Technical Skills

Languages & Frameworks: JavaScript, TypeScript, Python, FastAPI, Flask, Node.js, Express.js
Backend: REST APIs, Microservices, Event-Driven Architecture, Asynchronous Processing, Web-Sockets
AI: LLMs, RAG, LangChain, LangGraph, AI Agents, HuggingFace, OpenAI, Prompt Engineering, MCP, Skills, Ollama
Databases & Vectors: PostgreSQL, MongoDB, Redis, Chroma, Pinecone
Cloud & DevOps: AWS, Azure, GitHub Actions, Docker, Kubernetes, CI/CD, Argo Workflows
Messaging & Observability: Kafka, Prometheus, Grafana, LangFuse

Professional Experience

Full Stack AI Engineer, Perfecter AI Feb 2026 – Present

- Built AI-powered backend services for an insurance subrogation platform (LLM workflows, event-driven processing), replacing legacy UIPath automation and cutting claim extraction time by **90%**.
- Integrated an AI code-review agent triggered on every pipeline run to analyze code changes and post inline PR comments pre-merge, reducing manual code-review time by **60%** and preventing defects from reaching production.

Software Developer, Sify Technologies Jul 2023 – Feb 2026

- Architected cloud-native backend services (AWS Lambda, Step Functions, EC2, S3), reducing peak server load by **40%** and API latency by **35%** while cutting infra costs by **22%**.
- Engineered enterprise platform capabilities including RBAC, SSO, and secure REST API integrations, enabling scalable access management across production applications.

Key Projects

AI Insurance Subrogation Platform - Kubernetes, LangGraph, PostgreSQL, RabbitMQ, Kibana, RBAC 2026

- Designed a LangGraph-based AI pipeline for OCR, entity extraction, liability analysis, and demand letter generation, processing **5,000+ claims/month** and cutting manual review effort by **80%+**.
- Implemented RAG with structured prompt orchestration, improving claim-analysis accuracy by **35%** and reducing average turnaround time from **2 days to under 4 hours**.
- Built a workflow monitoring platform with DAG visualization, selective retries, and bulk restart using RabbitMQ and PostgreSQL, cutting failed-job recovery time by **70%** and improving on-call debugging efficiency.

AI Code Review & Auto-Fix Agent - LLMs, AST, GitHub MCP, GitLab MCP, SonarQube APIs, Docker 2026

- Built an AI-powered code review agent integrated via **GitHub and GitLab MCP servers**, automatically triaging **200+ SonarQube issues/month** and opening merge/pull requests with fixes.
- Leveraged AST-based diff parsing and repository-aware LLMs to auto-generate context-aware code fixes, achieving a **90% first-pass review acceptance rate** and cutting manual code-review time by **60%**.
- Designed tool-calling workflows that preserved project architecture and coding standards during patch generation, reducing post-merge regression bugs by **25%**.

GenAI eLearning Platform - LangGraph, RAG, Vector DB, Edge-TTS, AWS Lambda, Step Functions, S3 2025

- Built an end-to-end LLM-powered text-to-video pipeline that auto-generated **500+ hours** of course content, reducing video production time by **75%** and content-creation cost by **60%**.
- Developed a RAG-based assessment engine serving **10,000+ learners**, generating **15,000+ quiz questions** with **90%+** accuracy against course material and reducing instructor authoring effort by **85%**.
- Migrated the platform to event-driven microservices using AWS Lambda and Step Functions, reducing release cycles by **30%**, achieving **99.9% uptime**, and optimizing Redis and vector search to reduce peak-load latency by **45%**.

Education

Velammal Engineering College, B.Tech in Information Technology August 2019 – May 2023

Certifications

AWS Certified Developer - Associate May 2023
